

1.1.1 Introduction to project theme

The Construction Arrangement System is a project developed to improve how construction activities are planned, organized, and managed. In any construction project whether small or large proper coordination between the employees and clients are the important part of the construction project. Without a clear system in place, things can quickly become chaotic, leading to delays, confusion, and major problems.

This system aims to solve those problems by providing a digital platform that helps Builder to handle construction arrangement more effectively. In traditional construction methods, a lot of information is handled manually on paper or through scattered tools. This can lead to mistakes and poor communication between the clients and customers. Our system brings everything into one place, making it easier to manage the entire process from planning to execution.

Overall, the Construction Arrangement System is a step toward smarter, more organized construction management. It helps ensure that both small and large projects run efficiently, and with better coordination among all involved parties.

1.1.2 Limitations of Existing System

- Most construction activities are managed using paper-based records which can be easily misplaced, damaged, or lost. This makes it difficult to access important information quickly when needed.
- Without a centralized communication platform, coordination between clients, customers, users become inefficient. Lack of updates often leads to confusion and Miscommunication.
- Information is spread out in different places some on paper, some in emails, some in files. This makes it tough to manage everything smoothly.
- Employees salaries are managed manually, which often leads to mistakes in payment, delays, and confusion about how much each person should be paid.

- It requires huge amount of paperwork that is difficult to store, organize, and maintain over time. Not only does this increase the chances of losing important documents, but it also creates unnecessary waste and harms the environment. Managing everything on paper also slows down the process, especially when storing the old records.

1.1.3 Need & Scope of Proposed System

Proposed system

- The system enables clients to submit enquiries and service requests on system, allowing the construction team to respond quickly and maintain organized records of all communications
- The platform includes a feedback module where customers can share their experiences or suggestions, helping improve service quality and build trust between clients and service providers.
- The system safeguards all sensitive information related to clients, projects, and internal operations through controlled access and secure data management practices.
- The system uses login password for protection and the password is encrypted so that data transmissions and stored information, reducing the risk of data exposure or unauthorized access.
- The system includes functionality for managing staff salary details, allowing administrators to calculate, update, and store salary information accurately and efficiently
- To offer a centralized and user-friendly digital platform by bringing together enquiry management, client interaction, feedback, salary management, and secure data handling, the system ensures smooth and professional project coordination.

1.1.4 System Requirements

1.1.4.1 Hardware & Software Requirement

- Processor:- Ryzen 5
- RAM:- 4GB
- Keyboard:- Standard keyboard
- Mouse:- Standard Optical Mouse
- Monitor:- Color Monitor
- Hard Disk :- 160 GB and above
- Web Browser:- Microsoft Edge, Google chrome, Mozilla Firefox,.
- Framework :-Xampp Control panel v3.3.0
- Database :- MYSQL server
- System Type :- 64-bit operating system
- Operating System:-Windows 11

1.1.4.2 Features of Front-end and Back-end

Feature of Front-end

1. HTML (Hypertext Markup Language):

- Responsible for structuring the content of the web pages.
- Utilized to create the layout and design elements of the user interface.
- Defines the structure of the webpage using tags such as <head>, <body>, <div>, <p>, etc.
- Provides semantic markup for elements, enhancing accessibility and search engine optimization (SEO).
- Supports embedding of multimedia content such as images, videos, and audio.
- Tags like <header>, <footer>, <section>, and <article> provide meaning to the content, improving accessibility, and readability.

2. CSS (Cascading Style Sheets):

- Used for styling and formatting HTML elements.
- Defines the appearance, layout, and visual aspects of the web pages.
- Allows for customization of colours, fonts, margins, padding, and other visual properties.
- Enhances the appearance and layout of web pages, ensuring a consistent design across different devices and screen sizes.
- Supports the use of selectors to target specific elements and apply styles selectively.
- Facilitates the creation of responsive web designs that adapt to various viewport sizes.

3. JavaScript (JS):

- Provides interactivity and dynamic behaviour to the web pages.
- Enables client-side scripting for functionalities such as form validation, animations, and event handling.
- Allows for manipulation of HTML elements, CSS styles, and DOM (Document Object Model) manipulation.
- It runs in any browser without any compilation
- Primarily used to create interactive effects within web browsers.
- Responds to user actions like clicks, key presses, etc.
- It's not compiled like Java or C++; instead, the browser reads and executes it line by line, making it quick and easy to run.
- JavaScript now supports modular coding through import and export, making code easier to manage and reuse.

Features of Back-end

1. PHP (Hypertext Preprocessor):

- Server-side scripting language used for backend development.
- Handles server-side logic and interacts with the database to process user requests.
- PHP interacts with the database and other server components to perform operations like CRUD .
- PHP is widely used for building web applications and integrating with various web frameworks and content management systems.
- Excellent at collecting, processing, and validating form data.
- Includes features for data encryption, input validation, and session management.

2. MySQL (Database):

- MySQL is a relational database management system (RDBMS) used for data storage and retrieval.
- Stores user information, booking details, and other application data.
- Utilized for creating, querying, and managing database operations such as INSERT, SELECT, UPDATE, and DELETE.
- MySQL supports SQL (Structured Query Language) for creating, querying, and managing database operations.
- MySQL ensures data integrity, security, and scalability, making it a popular choice for web application development.
- Fast processing, ideal for large and dynamic web apps.
- Works well with languages like PHP, Python, Java, and frameworks like Laravel or Django.
- Handles large databases and supports horizontal/vertical scaling.

3.1 Input Design (without data)

1) User Registration Form

The screenshot shows a web browser window with the title "Register form" and the URL "localhost:8090/myproject/register_form.php". The form is centered on the page and contains the following elements:

- A circular profile icon placeholder at the top.
- Input fields for "Enter your name", "Enter your email", "Enter your password", "confirm your password", "Contact no", and "Interest in i.e apartment/banglow/residential constructi".
- A dropdown menu with "user" selected.
- A red "Register Now" button.
- A link "already have an accout ? Login" in green text at the bottom.

2) Login form:

The screenshot shows a web browser window with the title "Login form" and the URL "localhost:8090/myproject/login_form.php". The form is centered on the page and contains the following elements:

- The heading "Login now" in bold.
- Input fields for "Enter your name", "Enter your email", and "Enter your password".
- A blue "Login" button.
- A link "don't have an account ? Register" in green text at the bottom.

1BHK/2BHK/3BHK/1RK:

Enter total number of Floors:

inwork/done:

7] Employee Registration Form

A screenshot of a web browser displaying the first part of an 'Employee Registration' form. The browser's address bar shows 'localhost:8090/myproject/addemp.php'. The form is titled 'Employee Registration' and is set against a dark red background. On the left, there is a vertical image of a brown mug on a wooden desk. The form fields on the right are: Name, Employee ID, Email, DOB, Contact No, Gender, Address, Role, and Qualification. A 'Back' button is located in the top left corner of the form area.

Back

Employee Registration

Name:

Employee ID:

Email:

DOB:

Contact No:

Gender:

Address:

Role:

Qualification:

A screenshot of the same web browser displaying the second part of the 'Employee Registration' form. The browser's address bar remains the same. The form continues with fields for Qualification, Experience, Aadhar No, PAN No, Bank A/C No, Salary, Marital Status, City, Blood Group, and State. A red 'Create' button is positioned at the bottom of the form. The background image on the left now shows hands typing on a laptop keyboard.

Qualification:

Aadhar No:

PAN No:

Bank A/C No:

Salary:

Marital Status:

City:

Blood Group:

State:

Create

8] Salary Form

The screenshot displays a web browser window with the title 'Salary Management System'. The address bar shows the URL 'localhost:8090/myproject/salarymgt.php'. The main content area features a form with the following fields:

Salary Management System	
Employee Name	Employee ID
Department	Designation
Basic Salary	Home Allowance
Dearness Allowance	Bonus
Tax Deduction	Other Deductions

At the bottom of the form, there is a red button labeled 'Calculate & Save Salary'.

4.1 UI Testing (with data filled in Textbox Control)

1] User Registration Form:

The screenshot shows a web browser window with the title "Register form" and the URL "localhost:8090/myproject/register_form.php". The form is centered on the page and contains the following fields and elements:

- A profile icon placeholder at the top.
- A text input field containing "stephen".
- A text input field containing "stephenbirje007@gmail.com".
- A text input field containing "....".
- A text input field containing "....".
- A text input field containing "7219700441".
- A text input field containing "Residential construction".
- A dropdown menu with "user" selected.
- A red "Register Now" button.
- A link below the button that says "already have an account ? [Login](#)".

2] Login form:

The screenshot shows a web browser window with the title "Login form" and the URL "localhost:8090/myproject/login_form.php". The form is centered on the page and contains the following fields and elements:

- A heading "Login now" at the top.
- A text input field containing "stephen".
- A text input field containing "stephenbirje007@gmail.com".
- A text input field containing "....".
- A blue "Login" button.
- A link below the button that says "don't have an account ? [Register](#)".

3] Inquiry Form:

The screenshot shows a web browser window with the address bar displaying 'localhost:8090/myproject/inquiry.php'. The page title is 'Inquiry'. The main content area is titled 'Inquiry box' and features a large image of a man in a yellow jacket sitting at a table with a laptop. To the right of the image is a form titled 'Inquiry here' with the following fields:

- Name:** Sandip Rathod
- Contact:** 9699934014
- Email:** sandiprathod123@gmail.com
- Address:** sangli
- Name of project:** saphanya serinity
- Type:** 1bhk
- Date of Inquiry:** 02-04-2025
- Message:** i am welling intersted

A red 'Submit' button is located at the bottom of the form.

4] Client Form:

Back

Hello Client

Name:

5] Feedback Form:

Browser: User Here
URL: localhost:8090/myproject/user_page.php#feedback

Hello stephen

Please Share Feedback to us 🙏

Name: stephen birje

E-mail: stephenbirje@oo7gmail.com

How was your overall experience? good

How satisfied are you with the construction quality? 8

How satisfied are you with the usability of the project? 9

How satisfied are you with the design aesthetics? 10

How would you rate the functionality of the project? 9

How responsive was the support team? 8

Would you recommend us to others? yes

Send

6] Project Upload Form:

Browser: Admin Here
URL: localhost:8090/myproject/admin_page.php#project

Add project

Enter Project Name: saphanya serinity

Enter project ID: 101

Enter Location: Old Miraj road Ujiwal housing society Kupwad MIDC 416 436

Image: Choose file a.jpg

Area: 3267 sq feet

Project type apartment/baglow: Apartment - By Sinhmare's Creative Construction's and Builder

Enter price: 25,00,000

1BHK/2BHK/3BHK,1RK: 1BHK available

Enter total number of Floors: 6

inwork/done: inwork

Post

7] Employee Registration Form:

The screenshot shows a web browser window with the URL `localhost:8090/myproject/addemp.php`. The page has a dark header with the title "Employee" and a logo on the left. Below the header, there is a "Back" button and a large image of a coffee cup. To the right of the image is the "Employee Registration" form. The form contains the following fields:

Name:	Yash Govind Kadam
Employee ID:	12
Email:	yashkadamog@gmail.com
DOB:	25/09/2003
Contact No:	9812676489
Gender:	male
Address:	Sanjaynagar,Kolhapur
Role:	Site Engineer

The screenshot shows the continuation of the "Employee Registration" form. The form contains the following fields:

Qualification:	Civil Engineer
Experience:	2 yrs
Aadhar No:	5463-7562-8930
PAN No:	EJPTV8429Q
Bank A/C No:	187354690023459
Salary:	25,000
Marital Status:	UnMarried
City:	Kolhapur
Blood Group:	A+
State:	Maharashtra

At the bottom of the form is a red button labeled "Create".

8] Salary Form:

The screenshot shows a web browser window with the address bar displaying 'localhost:8090/myproject/salarymgt.php'. The page title is 'Salary Management System'. The form is titled 'Salary Management System' and contains the following fields:

Employee Name	Employee ID
Yash Govind Kadam	yash12
Department	Designation
site management	site engineer
Basic Salary	Home Allowance
25000	2500
Dearness Allowance	Bonus
2000	4000
Tax Deduction	Other Deductions
3000	3400

At the bottom of the form, there is a red button labeled 'Calculate & Save Salary'.

4.2 Result Testing (actual reports with data)

5.1 User Manual

User panel:

Tab/Button Name	Description/use
	This tab is the Home tab it serves the landing page of our website.
	The About us Tab is the second interface of our website here the user can read more information about website.
	The Service Tab is the third interface of our website here the user can see the construction project for inquiry.
	The Service Tab is the fourth interface of our website here the user can apply the construction request.
	The Feedback Tab is the fifth interface of our website here the user can give the feedback.
	The Logout button is use to destroy the session .

Admin Panel:

Tab/Button Name	Description/use
	This tab is the Home tab it serves the landing page for the admin.
	The Project post Tab is the second interface of website here the admin can post the information about project.
	The Employees Tab is the third interface of our website here the admin can manage the employees.
	The User Tab is the fourth interface of our website here the admin can monitor the User y the construction request.
	The Inquiry Tab is the fifth interface of our website here The admin can see the inquiry of the customers.
	It is Feedback tab used to see the feedback of client/customers etc.
	The Client tab used to see the client details.
	The salary tab is used to manage the salary of the employees.
	The Logout button is use to destroy the admin session.

6.1 Conclusion

To sum up, this construction arrangement project has successfully developed both an admin panel and a user panel. It's built using HTML, CSS, JavaScript, PHP, and MySQL, and it's mainly designed to help constructor admins manage things more smoothly.

The main idea behind this system is to create a clear and simple bridge between clients and builders. It helps them stay connected, communicate better, and manage construction-related tasks more easily. Overall, this project makes the whole process more organized and user-friendly, and with some future updates, it could become an even more powerful tool for the construction industry.

6.2 Further Enhancement

- Embracing technology, and enhancing user experiences
- Making of 3D models to allow users to rotate and explore construction designs in 3D.
- Payment gateway for Employee salary
- Making Material Management panel.
